Product Dispensing and Delivery System

Description

Liquid product dispensing and delivery system brand new to the industry that precisely mixes a liquid product with water and dispenses to multiple applications simultaneously. No more chemical injectors, tips, and ghosting. Uses computer controlled Dilutions that can be adjusted remotely. Complete remote monitoring of all necessary elements related to chemistry performance. Including static tank levels, and inventory control. Chemical cost's, analytics, and report are included.

Features

- Simplify your back room / control costs
- Accurate / Multi product dispensing
- Real time data / alerts / Cellular Connectivity
- Newest technology / for liquids 0-400cP
- Quality assurance / Inventory Replenishment

Benefits

- Saves time, space and labor
- No chemical backflow/ slug dosing, minimize product usage
- Cloud based data storage available 24/7
- Dilution control can be adjusted on the fly anytime, anywhere
- Reduced site visits, no more inventory backstock

Applications

Delivers Consistent and accurate mixed solution

Types of Operations

- Vehicle Washing
- Sanitation
- Industrial
- Agriculture

Type of Equipment

- Spray arches
- Under Chassis spray
- Low pressure product application
- Car wash Equipment

Specifications

- Hard/Soft, Hot/Cold water compatible (0.1 to 7 GPM)
- 24-240 vac/vdc product signal compatibility
- Small footprint- floor mount or wall mount
